

based on both the value for the mandatory parameter and the additional value for the optional parameter; and transmitting a third-party invocation request that includes both the value for the mandatory parameter and the additional value for the optional parameter, wherein the transmitting is to the particular third-party agent via one or more of the network interfaces, and wherein the transmitting initiates a dynamic dialog between the particular third-party agent and the client device.

9. The method of claim 8, further comprising:  
determining a further additional value for an additional parameter of the intended action based on user input during the dynamic dialog between the particular third-party agent and the client device, wherein the additional parameter is an additional mandatory parameter or an additional optional parameter;  
receiving further input provided by the user during the dynamic dialog between the particular third-party agent and the client device;  
determining that the further input indicates a desire to interact with another third-party agent; and  
in response to determining that the further input indicates a desire to interact with another third-party agent: transmitting, to an alternative third-party agent of the group of third party agents, an additional third-party invocation request that includes the value for the mandatory parameter, the additional value for the optional parameter, and the further additional value for the additional parameter.

10. The method of claim 9, wherein the additional parameter is the additional optional parameter.
